PORCELANOSA · VENIS

STON-KER®

La serie de gres porcellanato STON-KER®, está concebida para su utilización en suelos y paredes, en interiores y exteriores, debido a sus altas prestaciones técnicas, que le permiten soportar las condiciones atmosféricas más extremas, ofreciendo al mismo tiempo una alta resistencia al desgaste.

PORCELANOSA · VENIS han desarrollado un producto especial caracterizado por su elaboración exclusiva a partir de materias primas de primera calidad. Nuestros departamentos seleccionan a los mejores proveedores de arcillas, sílices, feldespatos,... que posteriormente pasarán por los más exigentes controles de calidad, convirtiendo a STON-KER® en el producto ideal para proyectos que demanden rigurosas especificaciones técnicas.

El sistema de producción de STON-KER® garantiza una uniformidad en el tamaño, planitud y ortogonalidad de las piezas, permitiendo su fácil colocación y perfecto acabado siempre que se tengan en cuenta las recomendaciones de manipulación y colocación.

La búsqueda continua de nuevos ámbitos de aplicación para el gres porcellanato STON-KER®, nos ha llevado a desarrollar formatos hasta de 59,6 x 120 cm para su utilización especial en fachadas.

The STON-KER® porcelain tile series is designed for use on indoor or outdoor walls and floors, given its first-class technical characteristics which allow the tiles to withstand even the harshest of weather conditions, with a high resistance to wear and tear.

PORCELANOSA · VENIS has developed an exclusive tile collection made of first-class raw materials. Our departments select the very best suppliers of materials such as clays, silica and feldspars, which are then subjected to the strictest of quality controls. All this makes STON-KER® the perfect choice for projects with rigorous technical specifications.

The manufacturing system used to make STON-KER® guarantees the uniform size, flatness and squareness of the tiles so that they can be easily laid to achieve a perfect finish, providing that the tile-laying recommendations.

Our non-stop search for new applications for STON-KER® porcelain tiles has led to the development of new formats of up to 59.6 x 120 cm for use as cladding on façades.

STON-KER®

Nuestro compromiso con el desarrollo sostenible.

PORCELANOSA y VENIS integran los objetivos estratégicos en sus sistemas de gestión y producción de forma transversal, de manera que la implementación de procesos respetuosos con el medio ambiente no se limita a acciones puntuales, sino que forma parte de su "know-how" en su conjunto. Ir más allá de las exigencias concretas de la legislación vigente en cada momento para la reducción del impacto de la actividad industrial sobre el entorno natural es, además, una de las actitudes firmemente asentadas.

El cumplimiento normativo es, junto a una obligación asumida con éxito, la consecuencia de un constante e intenso esfuerzo de la organización en la mejora de la eficiencia, y también la base para el desarrollo posterior de medidas correctoras de carácter voluntario, que se traduce en hechos como la obtención en 2006 de la Autorización Ambiental Integrada por parte de las plantas de fabricación de cerámica de PORCELANOSA y VENIS.

Por su parte, los procesos de diseño, fabricación, distribución y comercialización de pavimentos y revestimientos cerámicos disponen de la certificación medioambiental ISO 14001 desde 2004.

Otro de los elementos empleados en el control y disminución constante y progresiva del impacto de la actividad industrial en el entorno social y natural consiste en la elaboración de planes quinquenales específicos para la minimización de residuos, de los que se realiza un seguimiento exhaustivo.

En esta misma línea, PORCELANOSA y VENIS fomentan en todos sus sistemas de tratamiento de residuos la aplicación de los conceptos de reutilización, reciclaje y valorización (R), frente a la idea de eliminación (D).

Como consecuencia, el cien por cien de los residuos procedentes de las baldosas cerámicas fabricadas que se generan en los rechazos realizados por el control de calidad se reincorpora al proceso de fabricación.

Así mismo, PORCELANOSA ha desarrollado su serie STON-KER® Ecologic cuyo contenido en material reciclado pre-consumer es superior al 95% en masa, consiguiendo así mismo, el reconocimiento al esfuerzo realizado por minimizar el impacto ambiental con el etiquetado ecológico de la Unión Europea (ECOLABEL) para las baldosas de la serie STON-KER® Ecologic (autorización nº ES-V/21/002).

Además, todos los modelos de la colección STON-KER® fabricados por PORCELANOSA, poseen etiqueta ecológica del tipo III en forma de declaración ambiental de producto (DAPc) conforme a las normas ISO 14025 e ISO 21930.

We are committed to sustainable development.

PORCELANOSA and VENIS integrate the strategic objectives in their management and production systems in a transverse manner, so that the implementation of processes that are respectful towards the environment are not limited to specific actions, but instead form a part of its know-how as a whole. Going beyond the specific requirements of current legislation for reducing the impact of industrial activity on the environment is also one of their most firmly rooted attitudes.

Compliance with standards, as well as being a successfully adopted obligation, is the consequence of a constant and intense effort by the organisation towards improving efficiency, and also serves as the basis for the subsequent development of voluntary corrective measures, leading to the ceramic tile manufacturing plants of PORCELANOSA and VENIS being awarded Integral Environmental Authorisation in 2006.

In turn, the processes involved in the design, manufacture, distribution and commercialisation of ceramic wall and floor tiles have had ISO 14001 environmental certification since 2004.

Another of the elements used in the control and constant, progressive reduction of the impact of industrial activity on the social and natural environment consists of designing specific five-year plans for minimising waste materials, which are closely monitored.

Similarly, PORCELANOSA and VENIS promote the application of concepts of re-use, recycling and reappraisal (R) in all of its waste treatment systems, as compared to disposal (D).

As a result, all of the residues from the manufacturing of ceramic tiles as well as elements rejected by quality control are reincorporated into the manufacturing process.

PORCELANOSA has also developed its STON-KER® Ecologic series, with a content of more than 95% pre-consumer recycled material, obtaining the European Union ecolabel for the tiles from the STON-KER® Ecologic series (authorisation n° ES-V/21/002) in recognition for the efforts made to reduce its environmental impact.

Also, all the items from the STON-KER® range manufactured by PORCELANOSA, has an ecolabel of type III as environmental product declaration (DAPc) according to the standards ISO 14025 e ISO 21930.

Simbología · Symbols

Estos símbolos han sido creados para que se pueda interpretar de forma rápida el tipo de producto que se está visualizando.
These symbols have been created so that the type of product that is being observed can be quickly classified.

STON-KER®

Colección de porcelánicos con apariencia de piedra natural, de soporte coloreado y similar en aspecto a la decoración superficial. Con las mejores prestaciones técnicas y encaminados a revestir con garantías las zonas más exigentes.

STON-KER®

Collection of porcelain tiles with natural stone appearance, with a coloured body which is similar to the surface decoration. The best technical performance for covering with total guaranty the most demanding areas.

Exteriores

Las baldosas que incluyen este símbolo son aquellas que poseen propiedades intrínsecas (grado de compactación, absorción de agua, textura,...) que las hacen adecuadas para el revestimiento de aquellos ambientes sometidos a condiciones climatológicas severas y de resistencia al deslizamiento específicas.

Exteriors

Tiles displaying this symbol are those which have features (compaction degree, water absorption, texture,...) that make them suitable for the covering of settings undergoing harsh climate and specific slip resistance conditions.

Necesita rejuntado posterior

Los modelos identificados con este símbolo, preferentemente mosaicos y complementos, precisan ser rejuntados en toda su superficie.

It needs to be grouted

Models with this symbol (mainly mosaics and complementary tile pieces) need to be grouted across the whole surface.

> 95% Material reciclado

Contenido en material reciclado pre-consumer en masa.

> 95% Recycled materia

Content of preconsumer recycled material.

Metalizado

Acabado superficial que reproduce el aspecto que presentan las superficies metálicas brillantes (aluminio, acero, cobre, plata,...)

Metallized

A finish that reproduces shiny metal surfaces (aluminium, steel, copper, silver, etc)

Lustre

Aplicación superficial que dota de brillo a una parte o a la totalidad de la decoración de la baldosa, con el fin de remarcar zonas de relieve, dibujos o formas del diseño de la pieza.

Lustre

An application applied to the surface which either brings out part or all of the gloss in the decoration so that the relief, the pattern or the design of the tile is highlighted.

Mate

Acabado superficial de aspecto natural, no brillante.

Matt

Natural, not shiny surface finish.

Mate-Brillo

Modelos que debido a su diseño, combinan el acabado superficial de aspecto natural no brillante con zonas brillantes.

Matt-Gloss

Models with a design that combines a natural, non-shiny surface finish with shiny patches.

Destonificado V2 - V3 - V4

Los modelos identificados con este símbolo presentan un diseño general destonificado que puede requerir la conformación de paneles lo suficientemente representativos en número de piezas, como para poder apreciar el grado de variación tonal y de aspecto.

Tone Variations V2 - V3 - V4

Models marked with this symbol have a high degree of shade variation. As a result, a board with a tiled surface might be needed to reflect their true appearance and shade variation once laid.

Rectificado

Nombre que recibe el acabado de aquellas baldosas mejoradas dimensionalmente tras el proceso de cocción. El mecanizado al que se las somete realza igualmente la calidad estética del ambiente formado.

Rectified

Name given to the finish of tiles dimensionally improved after firing. The process enhances the aesthetic quality of the setting created.

DAPc

Posee etiqueta ecológica tipo III o declaración ambiental de producto de la construcción DAPc (registro número DAPc.002.003)

DAPc

Has an ecolabel of type III or environmental product declaration of construction (number registration DAPc. 002.003)

Escala de destonificación del color · Shade variation program scale

V1 Aspecto uniforme

Todas las piezas de una misma partida son similares.

V1 Uniform appearance

All the pieces from the same production run are similar.

V2 Ligera variación

Diferencias claramente perceptibles en textura y/o diseño pero con colores similares.

V2 Slight variation

Clearly distinguishable differences in texture and/or pattern with similar colors.

V3 Variación moderada

La intensidad del color de cada pieza puede variar significativamente, aunque los colores presentes en una baldosa serán representativos de los colores que cabe esperar en el resto de baldosas.

V3 Moderate variation

While the colors present on a single piece of tile will be indicative of the colors to be expected on other tiles, the amount of color on each piece will vary significantly.

V4 Variación sustancial

Diferencias de color aleatorias entre unas baldosas y otras, de manera que cada una de ellas puede tener colores completamente distintos de las demás. De este modo, la colocación final será única.

V4 Substantial variation

Random color differences from tile to tile, so that one tile may have totally different colors from that on other tiles. Thus, the final installation will be unique.

CTE Código Técnico de la Edificación Spanish Building Code

El CTE, Código Técnico de la Edificación, dentro de su Documento Básico de seguridad de Utilización 1 “DB SU 1 - seguridad frente al riesgo de caídas”, define los requisitos que debe cumplir un suelo para poder ser utilizado como pavimento de los edificios o zonas de uso sanitario, docente, comercial, administrativo, aparcamiento y pública concurrencia (excluidas las zonas de uso restringido). Para ello, el pavimento deberá cumplir con un valor mínimo al deslizamiento “Rd”.

El valor de resistencia al deslizamiento “Rd”, se determina mediante el ensayo del péndulo descrito en el Anexo A de la norma UNE-ENV 12633: 2003.

La siguiente tabla establece la clasificación de los suelos según su resbaladidad:

Safety of Use” Basic Document 1 (“DB SU 1 – Preventing Falls”) of the Spanish Building Code (the CTE in Spanish) defines the requirements that a floor covering must meet in buildings or areas used for health-related, educational, commercial, administrative or public purposes or for parking (excluding areas of restricted use). To comply, the flooring must achieve a minimum slip resistance (Rd) value.

The slip resistance (Rd) value is determined using the pendulum test described in Appendix A of standard UNE-ENV 12633: 2003.

The following table shows the rating system for flooring, depending on its slip resistance:

Resistencia al deslizamiento Rd
Slip resistance Rd

$Rd \leq 15$

$15 < Rd \leq 35$

$35 < Rd \leq 45$

$Rd > 45$

Clase
Rating

Resistencia al deslizamiento Slip resistance

Muchos fabricantes europeos de suelos, usan ensayos del tipo de la rampa para clasificar sus productos en función del grado de deslizamiento. Estos ensayos se llevan a cabo generalmente, usando la norma alemana DIN 51130.

El método implica el uso de sujetos que caminan adelante y atrás a través de un suelo impregnado y utilizado como banco de ensayos en forma de rampa. El grado de inclinación de la rampa se va incrementando gradualmente hasta que el sujeto que está ensayando, resbala. El ángulo medio de inclinación al que el sujeto resbala, es utilizado para calcular el ángulo crítico de deslizamiento.

La norma DIN 51130 utiliza unas botas de seguridad según norma EN 345 y aceite de motor como sustancia que impregne la superficie a ensayar.

Many European flooring manufacturers use tests like the ramp test to rate their products according to their slip resistance. These tests are generally conducted using the German standard, DIN 51130.

With this method, a person walks backwards and forwards on an impregnated ramp-type floor used as a test bench. The angle of the ramp is gradually increased until the person slips. The average angle at which the person slips, is used to calculate the critical angle of slip.

DIN 51130 uses approved safety boots according to standard EN 345 and engine oil to impregnate the test surface.

Valor total medio del ángulo de caída
Total mean value of slip angle

Clasificación
Rating

$6^\circ \leq \text{Ángulo} \cdot \text{Angle} \leq 10^\circ$

$10^\circ < \text{Ángulo} \cdot \text{Angle} \leq 19^\circ$

$19^\circ < \text{Ángulo} \cdot \text{Angle} \leq 27^\circ$

$27^\circ < \text{Ángulo} \cdot \text{Angle} \leq 35^\circ$

$35^\circ \leq \text{Ángulo} \cdot \text{Angle}$

USO EXCLUSIVO PARA EXTERIORES / USE ONLY IN EXTERIORS

Las características propias de los materiales con relieve, hace imprescindible la realización de limpieza más exhaustivas que materiales con superficies lisas.

Si el soporte lleva ya sus propias juntas estructurales o de partición, éstas deben de respetarse cuando se proceda a la colocación del recubrimiento cerámico. Se recuerda que la superficie máxima a revestir con brick collection sin juntas es de 25 m² a 35 m².

The features of the models with relief make it indispensable to perform more exhaustive cleaning than on materials with flat surfaces.

If the substrate already has its own structural joints or dividing joints, these should be respected when ceramic tiles are installed. It must be remembered that the maximum surface area to be covered with brick collection without dividing joints is 25 m² to 35 m².

IMPORTANTE / IMPORTANT

Para conseguir una continuidad de las juntas es necesario colocarlo con cruceta de 1 mm. Use 1 mm spacers to obtain a continuity.

* Necesita rejuntado posterior / It needs to be grouted
